**Assessing Bioavailability of Drug Delivery Systems: Mathematical Modeling** Jean-Maurice Vergnaud, Iosif-Daniel Rosca

Exploring how to apply in vitro/in vivo correlations for controlled release dosage forms, Bioavailability of Drug Delivery Systems: Mathematical Modeling clearly elucidates this complex phenomena and provides a guide for the respective mathematical modeling. The book introduces mathematical modeling methods for calculating the profiles of plasma levels obtained with controlled release dosage forms and provides examples and case studies to illustrate the techniques employed.

The author has considerable experience in investigating mathematical fundamentals that are related to pharmaco- and toxicokinetics, modified-release drug products, physiologic pharmacokinetics and statistical treatment in clinical situations. The mathematical models he has developed are particularly powerful because they account for such major parameters as the kinetics of drug release controlled by diffusion or by erosion, and the kinetics of absorption into and elimination out of the plasma. They are also able to solve the problem of determining the drug level in plasma as a result of patient non-compliance, incorrect dosage, and incorrect frequency and to determine the best dosage forms necessary for therapy.

Using master curves, the book highlights the inter-variability of the patients often expressed by different responses towards a drug. Thus, after evaluating a patient's pharmacokinetic parameters, the dose can be adapted to the patient, with the expectation of decreasing the side effects for each patient. Using dimensionless numbers in repeated doses, either for the time or for the plasma drug concentration, makes the master curves useful for every drug, providing that its pharmacokinetics was linear. These master curves address clear information either to the patients or to the therapists in a didactic and easy way. The patients can see from first look the effects of non-compliance and therapists can see the dramatic effects of inter-variability of patients towards a drug.

Drug discovery and dosage forms have become an increasingly time-consuming and expensive process. The development of a single drug can leave behind more than 10 to 15 years of work. Discussing time and cost-effective methods as alternatives to conventional in vivo methods, the book helps you analyze and integrate in vitro/in vivo correlations and apply them to patient care and drug consultation situations.

### **From reader reviews:**

#### **Curt Roepke:**

The book Assessing Bioavailability of Drug Delivery Systems: Mathematical Modeling will bring you to the new experience of reading any book. The author style to spell out the idea is very unique. Should you try to find new book to read, this book very acceptable to you. The book Assessing Bioavailability of Drug Delivery Systems: Mathematical Modeling is much recommended to you to see. You can also get the e-book in the official web site, so you can quickly to read the book.

#### **Helen Samuel:**

People live in this new day of lifestyle always try and and must have the spare time or they will get wide range of stress from both lifestyle and work. So , when we ask do people have extra time, we will say absolutely indeed. People is human not only a robot. Then we inquire again, what kind of activity are there when the spare time coming to you actually of course your answer may unlimited right. Then ever try this one, reading textbooks. It can be your alternative throughout spending your spare time, the particular book you have read is usually Assessing Bioavailability of Drug Delivery Systems: Mathematical Modeling.

#### **Willie Dominguez:**

Do you one of the book lovers? If yes, do you ever feeling doubt when you are in the book store? Try to pick one book that you never know the inside because don't ascertain book by its cover may doesn't work this is difficult job because you are afraid that the inside maybe not while fantastic as in the outside search likes. Maybe you answer could be Assessing Bioavailability of Drug Delivery Systems: Mathematical Modeling why because the fantastic cover that make you consider with regards to the content will not disappoint you actually. The inside or content is actually fantastic as the outside or perhaps cover. Your reading sixth sense will directly show you to pick up this book.

#### **Richard Powe:**

In this period of time globalization it is important to someone to find information. The information will make professionals understand the condition of the world. The healthiness of the world makes the information easier to share. You can find a lot of references to get information example: internet, classifieds, book, and soon. You can observe that now, a lot of publisher which print many kinds of book. Typically the book that recommended for your requirements is Assessing Bioavailability of Drug Delivery Systems: Mathematical Modeling this book consist a lot of the information of the condition of this world now. That book was represented how does the world has grown up. The vocabulary styles that writer make usage of to explain it is easy to understand. The particular writer made some investigation when he makes this book. Honestly, that is why this book acceptable all of you.
