Ergodic Theory and Topological Dynamics of Group Actions on Homogeneous Spaces (London Mathematical Society Lecture Note Series)

M. Bachir Bekka, Matthias Mayer

Ergodic Theory and Topological Dynamics of Group Actions on Homogeneous Spaces (London Mathematical Society Lecture Note Series) M. Bachir Bekka, Matthias Mayer

The study of geodesic flows on homogenous spaces is an area of research that has yielded some fascinating developments. This book, first published in 2000, focuses on many of these, and one of its highlights is an elementary and complete proof (due to Margulis and Dani) of Oppenheim's conjecture. Also included here: an exposition of Ratner's work on Raghunathan's conjectures; a complete proof of the Howe-Moore vanishing theorem for general semisimple Lie groups; a new treatment of Mautner's result on the geodesic flow of a Riemannian symmetric space; Mozes' result about mixing of all orders and the asymptotic distribution of lattice points in the hyperbolic plane; Ledrappier's example of a mixing action which is not a mixing of all orders. The treatment is as self-contained and elementary as possible. It should appeal to graduate students and researchers interested in dynamical systems, harmonic analysis, differential geometry, Lie theory and number theory.

From reader reviews:

Larry Brackett:

As people who live in often the modest era should be revise about what going on or details even knowledge to make these keep up with the era and that is always change and make progress. Some of you maybe may update themselves by studying books. It is a good choice for you personally but the problems coming to you is you don't know what kind you should start with. This Ergodic Theory and Topological Dynamics of Group Actions on Homogeneous Spaces (London Mathematical Society Lecture Note Series) is our recommendation to cause you to keep up with the world. Why, as this book serves what you want and need in this era.

Grady Comer:

The experience that you get from Ergodic Theory and Topological Dynamics of Group Actions on Homogeneous Spaces (London Mathematical Society Lecture Note Series) is the more deep you searching the information that hide in the words the more you get considering reading it. It does not mean that this book is hard to recognise but Ergodic Theory and Topological Dynamics of Group Actions on Homogeneous Spaces (London Mathematical Society Lecture Note Series) giving you enjoyment feeling of reading. The article writer conveys their point in certain way that can be understood by simply anyone who read the idea because the author of this book is well-known enough. This particular book also makes your own personal vocabulary increase well. That makes it easy to understand then can go along with you, both in printed or e-book style are available. We suggest you for having this particular Ergodic Theory and Topological Dynamics of Group Actions on Homogeneous Spaces (London Mathematical Society Lecture Note Series) instantly.

Philip Martin:

Your reading sixth sense will not betray you, why because this Ergodic Theory and Topological Dynamics of Group Actions on Homogeneous Spaces (London Mathematical Society Lecture Note Series) publication written by well-known writer who knows well how to make book that can be understand by anyone who have read the book. Written inside good manner for you, still dripping wet every ideas and creating skill only for eliminate your hunger then you still uncertainty Ergodic Theory and Topological Dynamics of Group Actions on Homogeneous Spaces (London Mathematical Society Lecture Note Series) as good book not simply by the cover but also with the content. This is one reserve that can break don't evaluate book by its cover, so do you still needing yet another sixth sense to pick that!? Oh come on your reading sixth sense already told you so why you have to listening to an additional sixth sense.

Gary Wells:

As a pupil exactly feel bored in order to reading. If their teacher requested them to go to the library or make

summary for some guide, they are complained. Just minor students that has reading's heart and soul or real their leisure activity. They just do what the teacher want, like asked to go to the library. They go to generally there but nothing reading significantly. Any students feel that reading through is not important, boring along with can't see colorful photos on there. Yeah, it is for being complicated. Book is very important for you. As we know that on this age, many ways to get whatever you want. Likewise word says, ways to reach Chinese's country. Therefore , this Ergodic Theory and Topological Dynamics of Group Actions on Homogeneous Spaces (London Mathematical Society Lecture Note Series) can make you truly feel more interested to read.
