Interfacial Nanochemistry (Nanostructure Science and Technology) Hitoshi Watarai, Norio Teramae, Tsugo Sawada

This is the first book to feature interfacial nanochemistry of liquid/liquid interfaces, which is a new boundary field between analytical chemistry, colloid and surface chemistry, electrochemistry, laser spectroscopy, separation engineering, and interfacial organic synthesis. The liquid/liquid interface is a very general subject of interest both to pure and industrial chemists, especially those engaged in research on solvent extraction of metal ion and organic compounds, interfacial synthesis, and micro-scale analysis. This book will give them deep insight into the nature of the liquid/liquid interface and what kind of reactions can take place there.
