3D Printing in Space Committee on Space-Based Additive Manufacturing, Aeronautics and Space Engineering Board, National Materials and Manufacturing Board, Division on Engineering and Physical Sciences, National Research Council

Additive manufacturing has the potential to positively affect human spaceflight operations by enabling the in-orbit manufacture of replacement parts and tools, which could reduce existing logistics requirements for the International Space Station and future long-duration human space missions. The benefits of in-space additive manufacturing for robotic spacecraft are far less clear, although this rapidly advancing technology can also potentially enable space-based construction of large structures and, perhaps someday, substantially in the future, entire spacecraft. Additive manufacturing can also help to reimagine a new space architecture that is not constrained by the design and manufacturing confines of gravity, current manufacturing processes, and launch-related structural stresses.

The specific benefits and potential scope of additive manufacturing remain undetermined. The realities of what can be accomplished today, using this technology on the ground, demonstrate the substantial gaps between the vision for additive manufacturing in space and the limitations of the technology and the progress that has to be made to develop it for space use.

3D Printing in Space evaluates the prospects of in-space additive manufacturing. This report examines the various technologies available and currently in development, and considers the possible impacts for crewed space operations and robotic spacecraft operations. Ground-based additive manufacturing is being rapidly developed by industry, and *3D Printing in Space* discusses government-industry investments in technology development. According to this report, the International Space Station provides an excellent opportunity for both civilian and military research on additive manufacturing technology. Additive manufacturing presents potential opportunities, both as a tool in a broad toolkit of options for space-based activities and as a potential paradigm-changing approach to designing hardware for in-space activities. This report makes recommendations for future research, suggests objectives for an additive manufacturing roadmap, and envisions opportunities for cooperation and joint development.

From reader reviews:

Anthony Jarrard:

Why don't make it to become your habit? Right now, try to ready your time to do the important act, like looking for your favorite book and reading a e-book. Beside you can solve your problem; you can add your knowledge by the reserve entitled 3D Printing in Space. Try to make the book 3D Printing in Space as your friend. It means that it can for being your friend when you experience alone and beside that of course make you smarter than previously. Yeah, it is very fortunated to suit your needs. The book makes you a lot more confidence because you can know every little thing by the book. So , let me make new experience in addition to knowledge with this book.

Sang O\Connor:

Now a day individuals who Living in the era wherever everything reachable by interact with the internet and the resources included can be true or not call for people to be aware of each facts they get. How people have to be smart in obtaining any information nowadays? Of course the answer is reading a book. Studying a book can help persons out of this uncertainty Information specially this 3D Printing in Space book because book offers you rich information and knowledge. Of course the details in this book hundred pct guarantees there is no doubt in it everbody knows.

Jillian Harrington:

Nowadays reading books become more and more than want or need but also work as a life style. This reading behavior give you lot of advantages. The advantages you got of course the knowledge the particular information inside the book this improve your knowledge and information. The knowledge you get based on what kind of e-book you read, if you want attract knowledge just go with education books but if you want really feel happy read one along with theme for entertaining such as comic or novel. Typically the 3D Printing in Space is kind of publication which is giving the reader unforeseen experience.

John Davis:

Information is provisions for folks to get better life, information today can get by anyone with everywhere. The information can be a knowledge or any news even an issue. What people must be consider when those information which is from the former life are challenging to be find than now is taking seriously which one is acceptable to believe or which one the particular resource are convinced. If you receive the unstable resource then you obtain it as your main information there will be huge disadvantage for you. All of those possibilities will not happen within you if you take 3D Printing in Space as your daily resource information.
